Summary

IT professional who thrives on creating innovative solutions and problem solving. Experienced, knowledgeable, and driven with over 8 years in the IT field. Possessing a wide variety of technology skills ranging from business analysis to technical architecture and software engineering. Flexible and adaptive to shifting IT landscapes, skilled in architectural strategy, vision, and solution design. Possesses strong leadership, communication, and organizational skills. Seasoned in business process mapping, system analysis, various SDLCs, continuous improvement, software design, implementation, and documentation.

Skills

- IT Functions: Business Analysis, Requirements Gathering, Functional / Technical Specifications, Rapid Prototyping, Interface Development and Documentation, Web Services, SOA, Release Management, System Deployment, Continuous Integration, Version Control, Change Management, Process Automation, Unit Testing
- Programming: Java / J2EE, javascript, jquery, CSS, PHP, REST / SOAP services, shell scripting, CSS, Bootstrap
- Training in: Agile / Scrum, Business Analysis, Project Management, Oracle Commerce (ATG / Endeca), Hybris, TOGAF, LEAN, six sigma
- Certifications: ITIL Foundation, Agile Architecture, LEAN White Belt
- Software / Systems: Oracle Commerce (ATG / Endeca), Eclipse, Netbeans, Visual Studio, Atlassian Suite (Jira, Confluence, Stash, etc), Jenkins, Teamforge, Subversion, git, Hudson, Jenkins, SOAPUI, Lucene search engine, Apache, Tomcat
- Databases: Oracle, MySQL, PostgreSQL, Teradata, SQL Server

Experience

July 2015 – Present

Eaton Corporation

Commerce Platform Architect

- Responsible for the implementation, support, and maintainability of Oracle Commerce (ATG / Endeca) enterprise eCommerce solution
- Leverages technologies: Oracle Commerce (ATG / Endeca), Weblogic, HP PPM, HP BSM, Java / J2EE, Javascript / jQuery, Jenkins, Subversion, Sonarqube, Oracle Database
- Creates enterprise solutions for eCommerce platform, interfacing with middleware, data hubs, and multiple ERP systems
- Leads technical processes for on-boarding of thousands of customers and over \$10M in monthly revenue
- Performs gap analysis and design reviews for a wide range of projects and on-boardings.
- Creates architectural diagrams and specifications for new changes to the system
- Implements and coordinates monthly release process including tracking changes, code reviews, merging, code deployment, regression testing, and system monitoring
- Monitors all levels of application and servers for issues on both software and hardware
- Improves performance and maintainability of systems, identifies inefficiencies, and implements continuous improvement strategies
- Develops code for projects and defects as lead developer and technical resource for the Oracle Commerce platform (ATG / Endeca)

February 2015 – June 2015

Intermedix

Software Engineer – Systems Integration

- Developed, maintained, and created solutions for centralized web platform consisting of web services, data consolidation, enterprise identity management (SSO), and reusable components.

- Worked on interfaces with purposes ranging mobile notifications (GCM / APNS), geolocation, maps, SSO, and data centralization
- Used PHP, Java EE, SOAP, REST, jQuery, KnockoutJS, Bootstrap, and PostgreSQL
- Participated in continuous integration and deployment improvements using Jenkins, Ansible, Vagrant, Virtualbox, and automated unit tests with junit / phpunit.

January 2012 – February 2015

WESCO Distribution, Inc.

Solutions Architect

- Evaluated enterprise, vendor, and acquisition systems to create architectural vision and strategy
- Identified and reviewed solutions for projects and change requests related to full enterprise portfolio of over 100 applications and systems
- Participated in major projects including: acquisition integration, system migration, eCommerce upgrades, pricing / margin initiatives, financial services centralization, and many enhancements to the main point of sale system
- Created system flow charts, project specifications, swim lanes, and business process diagrams
- Created solutions, interfaces, architectural design, and standards for developers of systems on a variety of technologies including .NET, PHP, Java, and COBOL
- Assisted in requirements gathering, solutions, and rapid prototyping to meet users' needs across the organization.
- Led functional and technical design phases for many major development projects
- Assisted in decision making for pricing and margin improvement initiatives, including all technical assessments
- Led requirements, design, and implementation for pricing initiative that realized large basis point margin improvements
- Proposed and created enterprise platform to efficiently integrate processes and data for many applications. Included integrations for external systems, legacy point of sale system, acquisitions, Oracle, and newly created systems. The platform was created from the ground up using PHP (CakePHP), MySQL, jquery, javascript, Java, message queues; heavily leveraging SOA.
- Designed and implemented automation for development environment, including: version control change tracking, automated merging, release management, and deployment.

July 2011 – December 2011

Wolfe, LLC

Software Engineer II

- Developed and maintained several eCommerce websites using PHP, MySQL, jquery, javascript – including GiftCards.com and MyCoupons.com
- Identified future architecture and strategy as a member of the architecture task force and development environment teams

May 2008 – July 2011

WESCO Distribution, Inc.

Information Analyst

- Developed and maintained projects for custom point of sale system
- Implemented standards for code, architecture, and design
- Led technical design and generated technical specifications for new projects
- Enhanced and automated several functions within the development environment and change management process
- Worked as a member of a core team dedicated to implementing enhanced processes for SDLC, project management, project specifications, and agile development
